

APPLE/MAC VIRTUAL ENVIRONMENT OPTIONS

Desktop Edition

Our software will run on a MAC in a Windows virtual environment such as:

1. [VMWare Fusion](#): This would be our #1 pick. It's not free like some others but it's excellent and runs seamlessly with the Apple OS. We use Apple computers exclusively and use this VM ourselves. Please feel free to reach out if you have questions.
2. [Parallels](#): This is not free either but is similar in price to Fusion. We've had a lot of positive feedback about this VM.
3. [VirtualBox](#): This product has historically been open source (free) and we've heard limited but good things about it.
4. [Bootcamp](#): This is built-in to most Apple computers and, therefore, free; however, we hear mixed reviews.
